New improvements in MultiLine V2.26

1. Smoother navigation in transactions

Four extra arrow buttons have been added so that you can navigate more smoothly through your payments in “Transactions” and “Sent Transactions”: First, Previous, Next and Last.

You can also navigate smoothly through the transactions in an envelope in your Transactions tab. An envelope would previously close automatically once you had consulted a transaction.
2. Icon for uploaded payment files

A new icon in transactions indicates if payment files are uploaded in MultiLine.

3. New column Hash code in txt reports

The transactions overview report in TXT format shows a new column with the **hash code** of uploaded files. You can use this code for checking purposes with the hash codes created in certain accounting packages that allow this feature.
